

ECGs for Primary Care

The recording of ECGs is increasingly commonplace in Primary Care. ECGcourses.com therefore offers an intensive, one-day clinical course - 'ECGs for Primary Care', for GPs and GP trainees to develop the essential remit of skills required in this area and to advise on strategies for dealing with abnormal ECGs.

Topics Covered in One Day

- Foundation principles of the ECG
- Elective scenarios where ECGs should raise concern and lead to referrals
- Which referrals should be same-day, urgent outpatient or routine outpatient
- How to spot problems on elective ECGs and what to do about them:
 - **AF**
 - **Atrial Flutter**
 - **Atrial Tachycardia**
 - **Heart Block**
 - **Inherited cardiac diseases in the young (Long QT syndromes etc)**
 - **Ectopic beats**
 - **Old Infarcts**
 - **Pathological LVH**
 - **Benign ECGs that mimic significant abnormalities**
- We also cover emergency scenarios and their management, including:
 - **AF with rapid ventricular conduction**
 - **Ventricular Arrhythmia**
 - **SVTs**
 - **Acute ST Elevation MI**
 - **Non-STEMI**
 - **Complete Heart Block**
 - **Acute Coronary Ischaemia**

This is not just a course on ECG interpretation; this is an intensive, practical cardiology course with the ECG at its core. A 46-page A4 manual containing ECG examples and learning aides is also provided, to take away as a lifetime refresher course.
