- Dr Shane Gordon

Why is AF important?

- AF prevalence rate in primary care is 1.2%
 - 600,000 in England alone
- Atrial fibrillation predisposes patients to stroke, increasing stroke risk by 500-700%
- 12,500 strokes per year (of the 150,000 total) attributable to AF
 - 4,300 deaths in hospital
 - 3,200 discharges to residential care
 - 8,500 deaths within the first year

Projected Number of Adults With Atrial Fibrillation in the United States Between 1995 and 2050

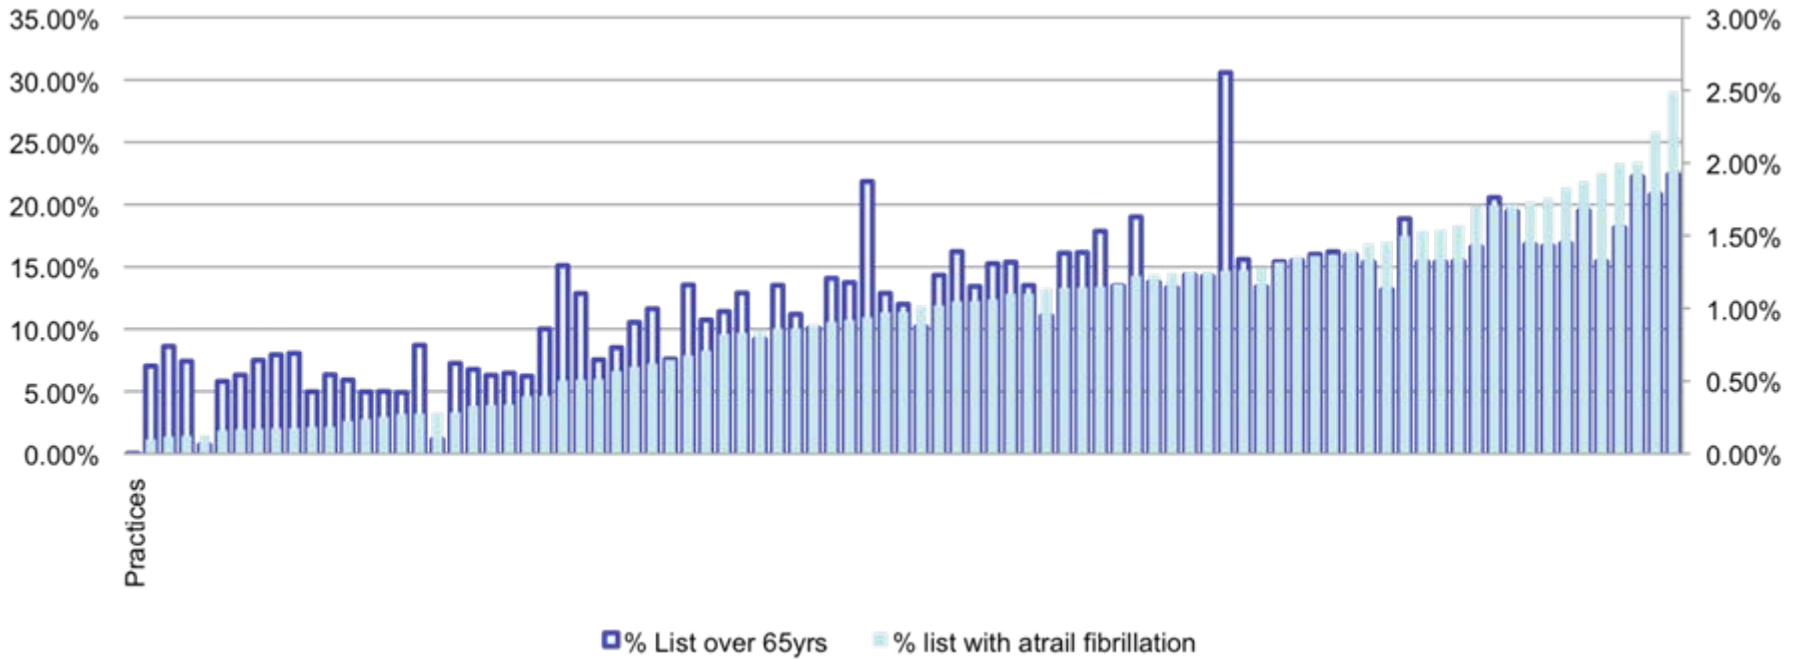

- Do we know who has atrial fibrillation?

Prevalence AF by practice

Direct Comparison

Westcliffe Cardiology Service

BMJ- August 2007 – Fitzmaurice et al

- This multicentered, cluster, randomized controlled trial of computerized general practices in England included 14,802 patients aged 65 years or older from 50 practices in England.
- Half the practices were slated as intervention ones and were randomly allocated to either systematic screening or opportunistic case finding.
- The primary endpoint was new cases of AF during the 12-month study period.

Fitzmaurice, D. A et al. BMJ 2007;335:383

- Do we know who has atrial fibrillation?

So How Do We Find Them?

Westcliffe Medical Practice
ShIPLEY

Westcliffe Cardiology Service

THEY COME TO YOU

- People attend with many problems

- Can present with breathlessness
- Can present with fatigue
- Can present with palpitations
- Can present acutely with chest pain
- And others

Westcliffe Medical Practice
Shipley

Westcliffe Cardiology Service

SEEK THEM OUT

- People attend for many reasons
 - Medication reviews
 - Chronic Illness monitoring
 - Flu vaccination
 - Just for a chat

What's the best way of detecting AF in primary care?

- Atrial Fibrillation: Strategies in Primary Care – Prof M.Kirby BJC 2005
- Many patients can be identified during day-to-day practice simply by taking the pulse at the wrist to detect irregularity.

(F)

1. 286799
2. Record #243.11 irregular pulse or #2431.1 regular pulse

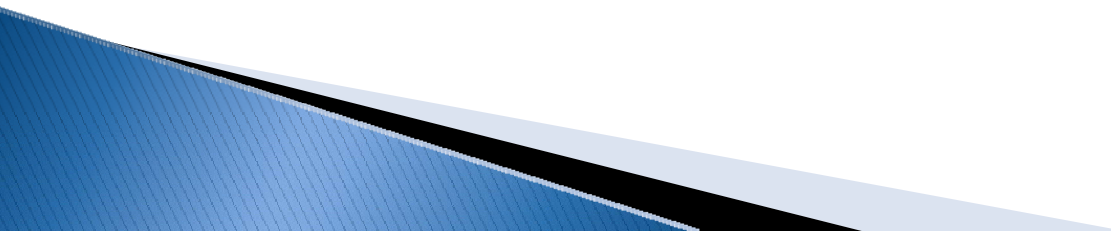

Opportunistic computer prompted screening 5/08 – 5/09

Key Facts

- ▶ 83.3% screened opportunistically
- ▶ 13% with irregular pulse
- ▶ 6.3% had ECGs
- ▶ 36% had AF on ECG
- ▶ Number needed to screen 43
- ▶ Change in prevalence 1.32 → 1.82%
- ▶ Prevalence of 65ys and older: 10.9%

Conclusion

- ▶ Even Jo Blog's practice can do it
 - ▶ Requires little resources
 - ▶ Requires virtually no training
 - ▶ It is cost effective
 - ▶ It really works: 38% increase in AF prevalence
- 

**TAKE
A
PULSE**

Undiagnosed AF

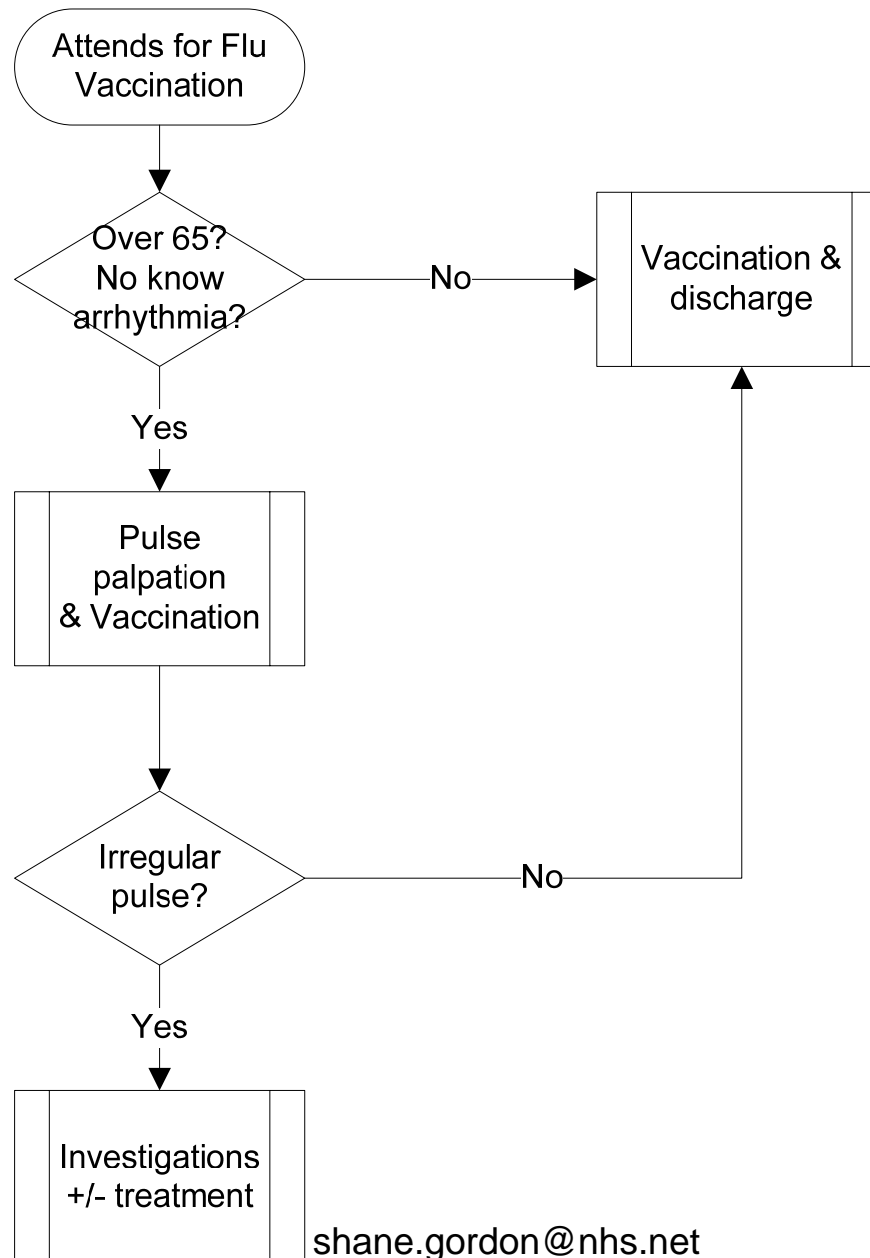

QoF Prevalences

- AF
 - National 1.2%
 - North East Essex 1.6% average (up to 4.8% in some practices)
- Stroke
 - National 1.6%
 - North East Essex 1.7% (up to 4% in some practices)

Pulse Palpation at Flu Vaccination

- Essex Cardiac & Stroke Network
- Dr. Max Hickman, Chairman Colchester PBC Group
- PBC Business Case August 2008
- LES agreed Sept 2008

Outcomes

37/43 practices in N E Essex Signed up to LES

- **34,201 patients screened** in 6 weeks
 - 3154 Patients found with irregular pulse (9.2%)
 - 189 Patients found with AF (0.55%)
 - 342 Patients found with other Arrhythmias (0.99%) **including 2 in Complete H. Block!**

Cost-Benefit Analysis

- Of 189 patients, 10 (5%) would suffer stroke in the next year
- Treatment of AF reduces risk of stroke by 50-70%¹, therefore approx. 5 strokes will be prevented in the next year

1 - Hart RG, Benavente O, McBride R, Pearce LA. "Antithrombotic therapy to prevent stroke in patients with atrial fibrillation: a meta-analysis.." Ann Intern Med 131 (1999): 492-501

Cost-Benefit Analysis

- The annual cost of Stroke to the UK economy is £8.9bn¹
- There are 200,000 patients suffering or surviving with stroke in the UK each year²
- Therefore, the annual cost of stroke is approximately £44k

1 - Saka et al. "Cost of Stroke in the UK", Age and Ageing, 2009

2 – ONS / Stroke Association

Cost-Benefit Analysis

Outlay = £68,402k Diagnoses = 189

Cost per diagnosis = £362

Strokes prevented next year = **5** @ £44k

Annual cost saving (recurrent) = £220k

Return on investment = 322%

National Service Framework For Older People by April 2004

- 'Every general practice, using protocols agreed with local specialist services, can identify and treat patients identified as being at risk of stroke because of high blood pressure, AF or other risk factors'

Heart Improvement programme

- A priority project was established to progress the improved identification and management of patients with atrial fibrillation (AF) within primary care

Approaches

- Use age corrected prevalence data and/or individual practice data to highlight practices with potentially low rates of AF
- Support practices in screening of appropriate patients using targeted opportunistic screening
- Support practices in reviewing their protocols for dealing with AF patients to ensure that approaches are evidence-based and consistent with current best practice
- Support practices' efforts to develop appropriate treatment services such as practice-based anticoagulation
- Examine local links for services for AF patients to ensure that these patients start promptly on an effective treatment pathway, including adequate systems for onward referral and specialist treatment

What's been going on

- AF screening in Flu clinics
Bedfordshire and Hertfordshire Cardiac Network
- Information about a pilot screening project to identify possible cases of AF in a target population group of over 65 years during the annual flu clinics in a GP surgery.
- Rapid Access Arrhythmia Clinic Database
Lancashire and South Cumbria Cardiac Network
- A blank database developed by Lancashire and South Cumbria Cardiac Network that can be used to record patient information, referred from primary care and accessing the specialist arrhythmia clinic. To gain administrator rights to the database, you will need to create yourself a new user.
- Identification and diagnosis of Atrial Fibrillation
Lancashire and South Cumbria Cardiac Network

What's been going on

- Document for identifying and managing patients with AF within primary care. The document needs to be used in conjunction with the AF algorithm and AF template dataset below.
- Communication plan - Atrial Fibrillation Management in Primary Care project
Lancashire and South Cumbria Cardiac Network
- Referral proforma for a Rapid Access Arrhythmia Service
Black Country Cardiac Network
- Anti-coagulation/anti-platelet therapy audit
Black Country Cardiac Network
- Hypertension guidelines
North Trent Cardiac Network
- Creating/developing an AF register
Leicestershire, Northamptonshire and Rutland Cardiac Network

What's been going on

- Guidelines on Diagnostics and Management of patients with Atrial Fibrillation
Leicestershire, Northamptonshire and Rutland Cardiac Network
- AF pathway with QoF indicators
Leicestershire, Northamptonshire and Rutland Cardiac Network
- AF treatment algorithms
Leicestershire, Northamptonshire and Rutland Cardiac Network
- Questionnaires to audit primary and secondary care
Anglia Cardiac Network

Commissioning for Stroke
Prevention in Primary Care -
The Role of Atrial Fibrillation

Food for thought...

- 150,000 strokes per year in the UK¹
- 410 per day
- 17 per hour
- Within the next four hours, 10 patients with AF will have suffered a stroke
- 8 would have been known to be high risk of stroke
- 6 should have been on warfarin
- 3 will go home
- 5 will end up in residential care
- 2 will die....
